During this reporting period, two heads have been delivered to MPIC and two more sent to the contractor for modification. The heads were received on 29 July and 17 August. After all are modified, it will be necessary for to send an optics man down for final alignment of all five heads which cannot be done until the comparators themselves are finally aligned.

representatives on At a meeting held with 6 June 1966, the following was determined

.. The replacement reticules are on hand for installation.

b. The replacement field lens is still under investigation but should be firmed up in another two weeks.

c. The first two heads (now at the contractor's for reticule and field lens installation) will be delivered o/a 15 July with the remaining four to follow at two week intervals.

d. The cost of the rield lens design is about mutually egreed upon that this would be split funded between and MPIC and that the required paper work from the contractor would be forthcoming. To date, the contractor has not complied with this submission, therefore, it is doubtful if the above delivery dates will be met.

It is felt that, in spite of numerous phone calls and contacts stressing the urgency of preceding with these modifications, the contractor is dragging his feet and making very little attempt to resolve the situation. The two heads on hand at the Contractor's were sent to him on 25 January 1966 for the modifications. 25X1A
